

Did you know?

 [VIDEO: Ramping down watering days when it's still hot](#)

While it may still be quite warm outside, seasonal watering schedules are based on the science of sunlight, not temperature.  The angle of the sun changes as we move from summer to fall, and that means less solar radiation on plants, as well as shorter days with plants spending less time in the sun.

Luckily, most desert plants only need water a couple times a week, regardless of temperature, especially if they are the heat- and drought-tolerant varieties found in our [water smart plant list](#).
