

## Cool Off Your Water Use This Fall

As another hot Southern Nevada summer gives way to a cooler fall, it's time for the community to continue conserving water by following the mandatory fall watering restrictions, in effect **Sept. 1 through Oct. 31**.

The fall restrictions limit spray irrigation to three assigned days per week; find your assigned watering days at **snwa.com**. By changing your watering clock each season, in accordance with mandatory seasonal watering schedules, you can save up to \$300 a year on your water bill.

When it comes to reducing outdoor water use—which accounts for about 60 percent of our community's consumption—it's a good idea to follow the motto, "Drip It, Don't Drown It!"

Plants and trees on drip irrigation systems need far less water than grass, which means your landscape can stay healthy and lush even with little irrigation. In fact, during the fall season, plants and trees can get by with only two days of watering per week. Duration will vary on the flow of your emitters.

While temperatures are starting to slowly cool off, residents with grass landscapes are reminded to continue running their spray irrigation systems during the early morning hours through October to minimize water lost to evaporation. Also, avoid watering when it's rainy or windy, and be sure to inspect and test your system on a regular basis. This can help you avoid overspray onto sidewalks and streets, which could result in a water-waste fee. And remember, spray watering is prohibited on Sunday.

To learn more about the seasonal watering restrictions, and for tips on how to keep your landscape healthy and vibrant all year, visit **snwa.com**.
